

INDEX

- acousto-optic modulators (AOMs), 218
air post, 78, 98
AlGaAs substrate, 76-77
AlGaAs as wide bandgap material, 20
aligned wafer bonding, 35-36
aligned pillar bonding, 35-36
Allied Chemical, 246
AMP, 246
amplitude-encoded binary-phase-only filters, 214
Antoniadis, Dimitri, 28
Arizona State University, 79 109
Asymmetric wells, 205
asynchronous-transfer-mode (ATM), 112
AT&T Bell Labs, 15
ATM Switch, 112-115
Auburn University, 231

back-emitting VCSEL arrays, 77, 91
ball-grid arrays (BGA), 182, 185-187
bidirectionally emitting I^2 -VCSELs, 60-61
bit-error-rate (BER), 165-168, 273
bottom-emitting VSCEL arrays, 89-90
bottom-emitting VCSELs, 125
bottom-emitting I^2 -VCSELs, 59
Bump or pad bonding, 225-226
buried heterostructure, 78

carrier diffusion, 124
CD-ROM, 220, 221
chemical mechanical polishing, 191
Chirovsky et al., 79
Choquette, 109
CLDA2 chip, 242

CMOS chips, 61, 64, 75-116, 196, 210, 213, 220, 221, 255, 258
CMOS/VCSEL chip, 63, 75-116
CMOS integrated circuits (ICs), 75
coefficients of thermal expansion (CTEs), 8-10
conductive-attachment top-bottom contacts, 80-110
coplanar flip-chip bonding, 80-110
current spreading, 124

Dapkus, 109
Deep proton lithography, 260-266
deposited dielectric Distributed Bragg Reflector (dd-DBR), 50, 51, 55, 57, 59
Detcom layer, 194, 199, 201
Detector Array, 240
Developed molding technique, 226-231
Dicing errors during dicing of the neodie layers, 237
Dicing errors in the fabrication of components, 237
dielectric growth windows (DGWs), 19-20
dielectric aperture, 78
differential efficiency, 149-150
digital-to-analog (DAC), 211
dual in-line package (DIP), 182

Eight-bit grayscale 2D MQW-SLM development, 210-212
electronic integration, 4-5
Electronic Processing Chip, 241
emitter-based transceiver array, 196-197
Emulators for technology characterization, 242-244
epitaxy on SonG, 33
epitaxy-on-electronics, 14-27

- fine-pitch wire bonding, 182, 185
- first null device, 125-136
- first peak device, 125-136
- flip-chip bonded, 49, 61-64, 68, 77, 123, 142, 153, 181, 226
- flip-chip (FC), 182, 185
- flip-chip details, 187-188
- focal plan array (FPA), 186, 191-192, 96, 199
- focal plane array fabrication, 193-195
- free space optical link, 165-168
- free space optical interconnects (FSOIs), 122, 123, 136, 144
- free-space 2D multichannel interconnection module, 266-267 free-space OPB, 259, 268
- Free-space approach, 255-256
- full width at half maximum (FWHM), 143, 205, 212, 258, 260
- GaAs MESFET integrated circuits, 75, 76, 79, 115
- GaAs substrate, 93, 101, 104, 111
- gallium-arsenide Ics, 16-18
- gallium-arsenide-on-silicon, 10-14
- Gaussian Beam Model, 256-258, 260
- GE, 231
- George, et al., 253
- Georgia Tech, 79
- Haney and Christensen, 254
- Helix driver, 240-244
- high-density interconnect (HDI), 231
- high-speed P²I²-VCSELS, 66-70
- high-speed optical correlator, 214-215
- High-speed Optical Printing, 218-219
- Honeywell, 79, 109, 237, 238, 239
- hybrid integration, 5, 104, 108
- hybrid integrated I²-VCSELS, 64
- Hyperspectral Data Processing, 215-216
- I²-VCSEL, 51-72
- I²-VCSEL design, 52, 54-55
