

PROCEEDINGS OF SPIE

# ***International Conference on Remote Sensing, Surveying, and Mapping (RSSM 2023)***

**Chao Zuo**  
*Editor*

**6–8 January 2023**  
**Changsha, China**

*Organized by*  
Anhui University of Science and Technology (China)  
Xi'an University of Science and Technology (China)

*Supported by*  
Beijing Institute of Geology of Nuclear Industry (China)  
Global Scientific Research Association (China)

*Published by*  
SPIE

**Volume 12710**

Proceedings of SPIE 0277-786X, V. 12710

SPIE is an international society advancing an interdisciplinary approach to the science and application of light.

International Conference on Remote Sensing, Surveying, and Mapping (RSSM 2023),  
edited by Chao Zuo, Proc. of SPIE Vol. 12710, 1271001  
© 2023 SPIE · 0277-786X · doi: 10.1117/12.2688325

Proc. of SPIE Vol. 12710 1271001-1

The papers in this volume were part of the technical conference cited on the cover and title page. Papers were selected and subject to review by the editors and conference program committee. Some conference presentations may not be available for publication. Additional papers and presentation recordings may be available online in the SPIE Digital Library at [SPIDigitalLibrary.org](http://SPIDigitalLibrary.org).

The papers reflect the work and thoughts of the authors and are published herein as submitted. The publisher is not responsible for the validity of the information or for any outcomes resulting from reliance thereon.

Please use the following format to cite material from these proceedings:  
Author(s), "Title of Paper," in *International Conference on Remote Sensing, Surveying, and Mapping (RSSM 2023)*, edited by Chao Zuo, Proc. of SPIE 12710, Seven-digit Article CID Number (DD/MM/YYYY); (DOI URL).

---

**Paper Numbering:** A unique citation identifier (CID) number is assigned to each article in the Proceedings of SPIE at the time of publication. Utilization of CIDs allows articles to be fully citable as soon as they are published online, and connects the same identifier to all online and print versions of the publication. SPIE uses a seven-digit CID article numbering system structured as follows:

- The first five digits correspond to the SPIE volume number.
- The last two digits indicate publication order within the volume using a Base 36 numbering system employing both numerals and letters. These two-number sets start with 00, 01, 02, 03, 04, 05, 06, 07, 08, 09, 0A, 0B ... 0Z, followed by 10-1Z, 20-2Z, etc. The CID Number appears on each page of the manuscript.

## REMOTE SENSING INFORMATION EXTRACTION AND SATELLITE POSITIONING

---

12710 02	<b>Construction of regional forestry ecological resources protection and sharing platform under the background of big data</b> [12710-10]
12710 03	<b>Research on the method of pure deformation field by GNSS and InSAR</b> [12710-7]
12710 04	<b>MST-GAN: a sentinel-1/2 fusion framework based on multiscale transform and GAN</b> [12710-15]
12710 05	<b>Multitask floor plan analysis based on multi-scale and self-attention</b> [12710-39]
12710 06	<b>Separable nonlinear least squares algorithm based on finite difference</b> [12710-20]
12710 07	<b>Study on target tracking algorithm in active and passive radar seeker data fusion</b> [12710-2]
12710 08	<b>A reverse distance optical system based on an aspheric surface</b> [12710-4]
12710 09	<b>Study on vegetation dynamic changes monitoring by remote sensing based on the vegetation index</b> [12710-16]
12710 0A	<b>Real-time fire detection using meteorological satellites during drought in Hunan Province</b> [12710-19]
12710 0B	<b>An unsupervised remote sensing image segmentation method based on hidden Markov model</b> [12710-8]
12710 0C	<b>Variation of vegetation water use efficiency and its response to climate based MODIS products in Baoji area, China</b> [12710-23]
12710 0D	<b>A slope filtering method for point cloud of dense vegetation terrain based on airborne LIDAR</b> [12710-34]
12710 0E	<b>Application of UAV remote sensing technology in 1:500 topographic map mapping</b> [12710-12]
12710 0F	<b>Latitude and longitude positioning system design</b> [12710-32]
12710 0G	<b>A road extraction method based on improved PSPNet</b> [12710-21]

- 12710 OH **Precise thermal control of space star camera and laser altimeter** [12710-11]
- 12710 OI **Research on the construction of knowledge graph based on multi-source heterogeneous geospatial data** [12710-14]
- 12710 OJ **Multisource remote sensing image registration based on geometric constraints** [12710-40]
- 12710 OK **Optimizing loading strategy for visualizing 3D photo-realistic model using human eye's area of interest** [12710-29]

---

**ENGINEERING MAPPING AND SPATIAL MORPHOLOGY ANALYSIS**

---

- 12710 OL **A rapid measurement method for residual deformation of aircraft structures** [12710-30]
- 12710 OM **Comparative experimental study of bridge detection methods based on deep learning** [12710-35]
- 12710 ON **SBAS-InSAR-based surface deformation monitoring of permafrost on Banks Island** [12710-18]
- 12710 OO **Study on the coordination degree between the urbanization level and the change of the cultivated land quantity in the resource-exhausted cities in the Yellow River Basin** [12710-28]
- 12710 OP **Regional dynamic monitoring of Changzhuang Reservoir during the "7-20" rainstorm in Zhengzhou using multi-source spaceborne SAR** [12710-9]
- 12710 OQ **Extraction of urban built-up areas in Shanghai based on night-time lighting data** [12710-5]
- 12710 OR **A geographically weighted Durbin model for spatial downscaling of land surface temperatures** [12710-6]
- 12710 OS **Measurement of coordination degree between urbanization level and cultivated land resource change: a case study of Zhuhai City** [12710-31]
- 12710 OT **Wetland vegetation identification based on improved JM-Relief F feature optimization algorithm** [12710-33]
- 12710 OU **Lightweight in-harbor ship detection based on UAV aerial images** [12710-42]
- 12710 OV **The spatio-temporal characterization of urban expansion of three urban agglomerations in China** [12710-17]
- 12710 OW **Optical image and SAR image registration based on improved SIFT-Like algorithm** [12710-22]
- 12710 OX **Spatio-temporal analysis of urban heat island in Shanghai over the past 30 years with Landsat images** [12710-38]

# Conference Committee

## *Conference General Chairs*

**Tarun Kumar Lohani**, Arba Minch University (Ethiopia)  
**Yang Wang**, Yunnan Normal University (China)

## *Publication Chair*

**Chao Zuo**, Nanjing University of Science and Technology (China)

## *Program Chair*

**Quingjiu Tian**, Nanjin University of Science and Technology (China)

## *Technical Program Committees*

**Jun Qin**, Southwest Jiaotong University (China)  
**Yang Zhao**, Harbin Institute of Technology (China)  
**Yunhao Chen**, Faculty of Geographical Science BNU (China)  
**Jiajia Yuan**, Anhui University of Science and Technology (China)  
**Anxin Ding**, Hefei University of Technology (China)  
**Jian Yang**, China University of Geosciences (China)  
**Chen Tao**, China University of Geoscience (China)  
**Xi Luo**, National Laboratory of Science and Technology on Space Microwave, Xi'an Institute of Space Radio Technology (China)  
**Yanjun Wang**, Hunan University of Science and Technology (China)  
**Huan Yu**, Chengdu University of Technology (China)  
**Thota Sivasankar**, Geographic Information System (GIS) Area, NIIT University (India)  
**Yufu Zang**, Nanjing University of Information Science &Technology (China)  
**Wenjin Yu**, Nanjing University of Information Science &Technology (China)  
**Qingyun Yan**, Nanjing University of Information Science &Technology (China)  
**Li Wei**, Lanzhou Jiaotong University (China)  
**Qingzhi Zhao**, Xi'an University of Science and Technology (China)

## Introduction

Remote sensing, surveying and mapping technology have played an important role in many fields, such as global change, ecology, environment, agriculture, forestry, meteorology, human activities and so on, and are highly valued by countries all over the world. Mining data information comprehensively, producing multi-scale remote sensing and mapping products, carrying out scale conversion, analysis and application of authenticity inspection products are the essence of remote sensing and mapping, and the core of science.

In order to bring in the latest progress in theory, technology and application in the field of remote sensing and surveying at home and abroad in recent years, and show the latest achievements, 2023 2<sup>nd</sup> International Conference on Remote Sensing, Surveying and Mapping (RSSM 2023) was held in Changsha, China on January 6<sup>th</sup> to 8<sup>th</sup>, 2023 via virtual form. It was attended by about 60 participants from different countries.

The Conference presented an outstanding program of papers covering the most recent advances in remote sensing, surveying and mapping, including Environmental Remote Sensing, Image Data Processing Technology, Hyperspectral Image Processing, Geodetic Survey, Surveying and Mapping Technology, Engineering Survey, etc. The papers in this Proceedings published by the Society of Photo-Optical Instrumentation Engineers (SPIE) represent a collection of the invited talks.

At this meeting we had a comprehensive overview of this fascinating field and of future scenarios thanks to the participation of leaders of the most important projects. Associate Professor Qingzhi Zhao from Xi'an University of Science and Technology, China performed a keynote speech and shared with us his own research experience and professional view with the report Research on the Key Technologies of GNSS Multi-Dimensional Water Vapor Retrieval. Atmospheric water vapor plays an important role in studies of weather and climate changes, and the global navigation satellite system (GNSS) is one of the main technologies for water vapor retrieval. This report introduced the basic principle of GNSS water vapor retrieval and key techniques of GNSS two-dimensional and three-dimensional water vapor retrieval. In the 2-d water vapor retrieval, a high-time resolution PWV data sets at specific points based on non-measured meteorological parameters was generated, and a high spatial resolution PWV retrieval method was then proposed. In the 3-d water vapor retrieval, a non-uniform symmetrical horizontal grid division method was first proposed for water vapor tomography.

We would like to thank the participants, especially those who contributed speeches, posters, and manuscripts, for making RSSM 2023 such an exciting and memorable conference. We thank the Technical Program Committees for putting together an outstanding program. Finally, we acknowledge the members of SPIE for their tireless efforts in the preparation of this volume, and all our colleagues whose friendly and efficient service contributed to the success of the 2023 Second International Conference on Remote Sensing, Surveying, and Mapping.
